

Alphapack

A Streamlined and Secure Data Collection Process

ABOUT ALPHAPACK

Alphapack is a user-friendly, automated data collection tool on the Enterprise platform which utilises the latest web-based technology. Alphapacks are initially created from Alphatax computations and can be edited before releasing to a finance professional to complete. Completed Alphapacks are automatically integrated in one simple step into Alphatax so the computation can be finalised in a timely and efficient way.

KEY BENEFITS

- Fully integrated into Alphatax computations
- Data is transferred using secure web transfer
- Familiar interface for Alphatax users
- Fully Customisable Tax Packs
- Reduces risk from incorrect data input
- Time saving for tax professionals
- More time available for effective tax consideration
- Full audit trail of data input from Alphapacks

KEY APPLICATION FEATURES

PROCESS AUTOMATION

Creation of the Tax Packs, their distribution and the collection of data from them is a simple and speedy process using the Alphatax Enterprise Database capabilities. Data is continuously saved on the Enterprise Database throughout the cycle so that up-to-date figures are always available.

FAMILIAR INTERFACES

The Alphapack is generated from an Alphatax computation, therefore, it has a structured, familiar and compatible format for the entry of raw accounting data.

SECURE WEB PORTAL

Alphapacks are published on a secure web portal ensuring all data is protected at each stage of the data gathering process. Passwords are used to control access to the packs at all times. As the data transfer process utilised a secure portal, firewall issues which can effect email are avoided.

FULLY CUSTOMISABLE

Each Alphapack starts with an Alphatax computation. It can be customised so that the appropriate statements are included within each pack. Multiple packs can be generated and customised for individual finance users. The packs can also be customised during the data gathering cycle so that the relevant information can be captured as required. Alphapacks can also include tax technical inputs which can be completed by the end user if appropriate.

CONTROL OF THE DATA CAPTURE PROCESS

Using specific statements within Alphatax, full control of the Alphapack process can be monitored. Audit trails are recorded for all events in the Alphapack cycle so that the Alphatax user can keep control over the progression of the data capture.

SUMMARY

With Alphapack you can ensure a quicker data capture process using secure web technology alongside the familiar and reliable Alphatax Software, thus reducing risk and compliance costs.

We have helped more than 1,300 businesses over a period of nearly three decades to realise value from tax technology – so why not call us today to **book a live demonstration on: 01784 777 700**
